

Interpon D drives Ferrari World

Interpon D Approved Applicator and Service First Associate Euro Quality Coatings in Cardiff have recently been involved in an impressive project for Ferrari World on Yas Island, in Abu Dhabi.

Due to open in 2010, Ferrari World is set to be the world's largest indoor theme park sitting under a roof designed in the style of a classic double-curve body shell of a Ferrari GT car. The park itself promises to be a major attraction.

1,784 façade wall fins have been commissioned on the project, designed to mimic engine cooling fins. The fins are part powder coated aluminium extrusion and part glass based fabric. Totalling approximately 45,000m², these fins have been coated in AkzoNobel Powder Coatings. Euro Quality Coatings applied Interpon D architectural polyester in a white satin finish to the façade wall fins.

AkzoNobel Powder Coatings range of architectural polyesters, Interpon D, provide superior exterior durability and colour retention and conforms to the requirements of all the major European architectural finishing standards.
