

# Interpon EC Waterloo Station

A major refurbishment at Waterloo Train Station in London has recently been undertaken using Interpon powder coatings.

Interpon Approved Applicator SAS International were chosen to supply their bespoke metal ceiling tiles and column cases for the main ticket gate refurbishment. SAS International specified Interpon EC, an anti-graffiti paint finish for the job and chose a gloss white colour.

Interpon's polyurethane powder coatings have been formulated to have outstanding anti-graffiti properties and excellent durability. They are easy to clean and have a high resistance to scratches, perfect properties for a public train station.

As Europe's largest ticket line, all work at Waterloo Station had to be completed outside of opening hours to minimise traveller disruption.
